Located on Goat Island, NSW, our project redevelopment is to turn the Island into a holiday retreat, aiming to create an accessible, peaceful and culturally getaway designed specifically for elder visitors. Through collaborative designing, the project brings together architecture, environmentally sustainable construction and a community-minded approach for the visitors to ensure the land remains a natural landmark. Our design centres around a new waterfront transportation terminal and 4 residential apartment units, offering comfort and tranquility for elders.

Overcoming Obstacles:
- Limited Accessibility to the Island:

The main challenge of reaching Goat Island, the proposal introduces a dedicated boat transportation terminal for elder travelers. The terminal includes shaded waiting areas, a 2nd floor glass view of the Sydney Harbour and accessible pathways that ensure smooth transitions between the land and transportation.

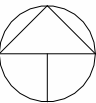

-Environmental Sensitivity
Given the island's cultural significance, the design minimises land disturbance by elevating structures where possible and positioning buildings to preserve existing vegetation.
